## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-37 are rejected under 35 U.S.C. 103(a) as being unpatentable over the combination of Nee et al (US Patent No. 4,729,940) and Hecq et al (US Patent No. 4,797,316).

See Nee in the abstract; Figs 1- 5 column 2; lines 39-60; column 3, lines 36-64; column 4, lines 1-17, column 7, claim ; column 6, lines 4-23. Nee discloses a process substantially as claimed. It is disclosed a process of exposing with a laser beam on substrate having thereon a copper layer and a photoresist layer, and developed the exposed photoresist layer to form a photoresist microstructure pattern. Nee fails to teach the use of a positive type photoresist wherein when developed the exposed portion of photoresist left over. However, it has been known in Hecq to use either negative photoresist or negative resist in column 10, lines 30-37 wherein the positive type photoresist and negative type photoresist behaves in opposite manner. It would have been obvious to the worker of ordinary skill in the art at the time the invention was made to use either the negative type resist or positive type photoresist in the process taught in Nee providing as how negative type and negative type photoresist taught in Hecq.

### *Conclusion*

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
